ABOUT ME

Flutter Developer with internship experience in building responsive, cross-platform mobile applications using Flutter, Firebase, REST APIs, Provider, and MVVM architecture. Passionate about developing clean, scalable applications and continuously improving my technical skills.

EDUCATION

Bachelor of Computer Information Systems (BCIS) *2022 - Present (2026)*
Pokhara College of Management

+2 (Higher Secondary) *2022*
Global Collegiate School (3.26)

Secondary Education (SEE) *2020*
Kankai Secondary Boarding School (3.50)

WORK EXPERIENCE

Flutter Developer Intern — NepTechPal *3-Month Internship*

- Developed an AI image generation mobile app in Flutter, integrating a token-based REST API (with Bearer token).
- Built a full-featured e-commerce application using Flutter and Firebase, implementing product listings, cart, and order management.
- Applied the MVVM architecture with the Provider package for scalable, maintainable state management.
- Collaborated with the team on API integration, debugging, and UI implementation from Figma designs.

PROJECTS

AI Image Generation App

- Built an AI-powered image generation app in Flutter, integrating a token-based REST API with Bearer token.
- Added a feature that recommends image styles to the user after each generation, helping guide their next creation.
- Used Provider for state management to handle image generation requests, loading, and error states cleanly across the UI.

E-Commerce Mobile App

- Developed a full-featured cross-platform shopping app using Flutter and Firebase, covering product catalog browsing, add-to-cart, favourites/wishlist, and order placement.
- Implemented Firebase Authentication for secure user sign-up/login and session management.
- Architected the app using MVVM with Provider for scalable, maintainable state management across cart, favourites, and order flows.
- Structured Firestore data models to support real-time product, cart, and order updates.

News App (Personal Project)

- Built a live news aggregator app fetching real-time articles via REST API, with category-based filtering for a personalized reading experience.
- Used Provider to manage app state across the news feed, filters, and loading/error handling.

Food Ordering App (Academic Project)

- Built a food ordering app with Firebase Authentication for user sign-up/login, Hive for local offline storage, and Firebase Cloud for backend data sync.
- Implemented add-to-cart and favourites/wishlist screens, using Provider with MVVM to separate cart/favourites logic from UI.
- Built dynamic cart pricing logic that automatically updates the total price in real time as users increase or decrease item quantity.

Spotify Clone (Personal Project)

- Recreated Spotify's UI/UX in Flutter with pixel-accurate design fidelity, including custom animations and transitions.
- Integrated a REST API to enable 30-second song preview playback, using Provider to manage playback state across the app.

Netflix Clone (Personal Project)

- UI/UX-focused clone of Netflix built in Flutter, with an emphasis on pixel-accurate design and smooth screen transitions.
- Integrated a REST API to fetch and stream video content, with a dedicated detail screen for each title.
- Implemented Firebase Authentication for user sign-up and login.
- Structured the app using MVVM with Provider for clean, maintainable state management.

SKILLS

- Flutter & Dart
- MVVM Architecture
- REST API Integration
- Provider (State Management)
- Firebase (Auth, Firestore, Storage)
- Python Programming
- Git & Version Control
- GitHub
- API Testing (Postman)

CERTIFICATIONS

- Python Programming Certificate — ICI Lab, Pokhara (2024)
- Intern Certificate — NepTechPal
